FRAMEWORK & PRACTICE GUIDE

INTRODUCTION

About This Guide

This guide is yours to keep. It contains the three frameworks delivered as part of **The Team Effectiveness Workshop**. Each one is a precise operating structure for the patterns your team's diagnostic is likely to have surfaced.

These are not theories. They are specific enough to apply in a meeting, and clear enough to teach to your team. Return to the relevant framework when the pattern emerges.

HOW TO USE THIS GUIDE

Use the framework that matches what you are observing. When a handoff breaks or alignment is assumed rather than confirmed, turn to **The Clarity Loop**. When a decision stalls or gets revisited, use **The Decision Engine**. When effort and output stop matching, use **The Collaboration Reset**. Each section includes a diagnostic prompts box; take those into your next one-on-one.

THE THREE DIMENSIONS

DIMENSION	WHAT WE MEASURE	FRAMEWORK
Communication	Who clarifies, who assumes. Whether alignment is verified or guessed.	The Clarity Loop
Decision-Making	Who decides, who defers. How constraints surface, and how the team commits.	The Decision Engine
Collaboration	How the team handles role collision, breakdowns, and recovery under stress.	The Collaboration Reset

The frameworks are not sequential; they address different patterns. Your team's diagnostic report will identify which dimension showed the clearest signals. Start there; the others remain relevant as your team develops.

FRAMEWORK 01

The Clarity Loop

COMMUNICATION DIMENSION

CORE PRINCIPLE

High-performing teams don't communicate in straight lines; they close the loop. Most breakdowns come not from bad intentions, but from a loop left incomplete.

THE FIVE STEPS

1

State Clearly

Define the objective, deliverable, and context.

2

Check Understanding

Don't assume; verify how it was understood.

3

Invite Questions

Make questions expected: "what's unclear?"

4

Adjust Language

If it's not landing, reframe and drop jargon.

5

Confirm Alignment

Both sides can state objective, timeline, success.

Prevents rework, assumption drift, tone escalation, and hidden misalignment.

SIGNS IT'S BREAKING DOWN

- Tasks come back completed, but to the wrong interpretation.
- "I thought you meant..." shows up after the work is done.
- Questions arrive after work has begun, not before it.
- Updates are given without confirming they were understood.
- Nobody plays back agreed actions; alignment is assumed.

HOW TO APPLY IT

Reach for it before any handoff, task assignment, or next step is confirmed; after a meeting where alignment was assumed rather than verified; when the same misunderstanding keeps happening between the same people.

Both sides share responsibility, but the receiver drives the loop.

MANAGER DIAGNOSTIC PROMPTS

- At your last significant handoff, did you confirm understanding, or assume it?
- Where do things fall through the cracks? Which step of the loop breaks there?
- Who on your team verifies before acting? Who defaults to assuming?

FRAMEWORK 02

The Decision Engine

DECISION-MAKING DIMENSION

CORE PRINCIPLE

Leadership here isn't charisma; it's structured judgment under constraint. The engine makes a good call possible when information is incomplete and resources are limited.

THE FIVE STEPS

1

Define Objective

Name the outcome you're optimising for.

2

Clarify Constraints

Time, budget, authority, information.

3

Allocate Resources

Spend time and attention deliberately.

4

Decide & Commit

Make the call and own it.

5

Review & Adjust

Reassess against the objective.

Prevents rework, misalignment, wasted resources, and decision paralysis.

SIGNS IT'S BREAKING DOWN

- Decisions get revisited in the following meeting, or the one after.
- Constraints surface after commitments have already been made.
- The team commits in the room, then re-litigates outside it.
- Nobody is clearly accountable for the outcome.
- "We decided that last month" is a phrase you say often.

HOW TO APPLY IT

Reach for it before any decision that involves more than one person; when a decision keeps getting re-opened after it was made; when the team is stuck circling the options.

A decision isn't made until someone owns the outcome.

MANAGER DIAGNOSTIC PROMPTS

- Name a decision your team revisited last month. Which step was incomplete?
- Who clarifies constraints before committing? Who commits, then escalates later?
- How does your team signal a decision is final versus still open?

FRAMEWORK 03

The Collaboration Reset

COLLABORATION DIMENSION

CORE PRINCIPLE

High-performing teams aren't conflict-free; they reset faster. Conflict isn't the problem; unmanaged conflict is. The Reset is a structured interrupt, not a confrontation.

THE FIVE STEPS

1

Pause

Interrupt escalation early.

2

Surface Assumptions

Make hidden expectations visible.

3

Clarify Roles

Re-establish who owns what.

4

Re-Align Objective

Re-anchor to the shared outcome.

5

Recommit

Agree the next action and owner.

Prevents blame cycles, escalation loops, fragmentation, and slow structural decay.

SIGNS IT'S BREAKING DOWN

- People are working hard but in parallel, not in coordination.
- The same handoff keeps failing, even after it's been discussed.
- Effort and output don't match; a lot happens, little lands.
- Role boundaries are unclear and nobody wants to raise it.
- Reviews surface the same root cause as last time.

HOW TO APPLY IT

Reach for it when the team is stuck and pushing harder isn't working; when the same breakdown keeps happening between the same people; when role boundaries are unclear and things are slipping.

The Reset is a structured interrupt, not a confrontation.

MANAGER DIAGNOSTIC PROMPTS

- Where does effort not translate to output? What sits between the two?
- If each person described their role, would the descriptions overlap, or leave gaps?
- Name a recurring breakdown you've addressed more than once without it resolving.

QUICK REFERENCE

The Three Frameworks at a Glance

FRAMEWORK 01

The Clarity Loop

COMMUNICATION

Teams don't communicate in straight lines; they close the loop. Most breakdowns come from a loop left incomplete.

THE FIVE STEPS

- 01 State Clearly
- 02 Check Understanding
- 03 Invite Questions
- 04 Adjust Language
- 05 Confirm Alignment

KEY SIGNAL

Tasks come back completed, but to the wrong interpretation.

DIAGNOSTIC PROMPTS

- Did you confirm understanding, or assume it?
- Which step of the loop breaks for you?

FRAMEWORK 02

The Decision Engine

DECISION-MAKING

Leadership here isn't charisma; it's structured judgment under constraint, when information and resources are limited.

THE FIVE STEPS

- 01 Define Objective
- 02 Clarify Constraints
- 03 Allocate Resources
- 04 Decide & Commit
- 05 Review & Adjust

KEY SIGNAL

Decisions get revisited in the following meeting, or the one after.

DIAGNOSTIC PROMPTS

- A decision you revisited: which step was incomplete?
- Who commits, then escalates later?

FRAMEWORK 03

The Collaboration Reset

COLLABORATION

Teams aren't conflict-free; they reset faster. Conflict isn't the problem; unmanaged conflict is.

THE FIVE STEPS

- 01 Pause
- 02 Surface Assumptions
- 03 Clarify Roles
- 04 Re-Align Objective
- 05 Recommit

KEY SIGNAL

People are working hard but in parallel, not in coordination.

DIAGNOSTIC PROMPTS

- Where does effort not translate to output?
- Would role descriptions overlap, or leave gaps?

Keep this page close. When a pattern shows up in a meeting, match it to a framework, then turn to that section for the full set of steps and prompts.

30-DAY BEST PRACTICES

Turning the Workshop into Habit

Four weeks, one focus each. This is the evergreen rhythm for embedding the frameworks, the same for every leader, every cohort. It is not a team-specific plan: the actions tailored to your team's data live in your Leader's Insight Report.

WEEK	Week 1	Week 2	Week 3	Week 4
FOCUS	Ground the data	Name what you see	Apply deliberately	Lock in the habit
ONE ACTION	Re-read your team report. Underline the one sentence that surprised you most.	In one 1:1, name one pattern you observed, without blame.	Run one meeting using a single framework element on purpose.	Tell your team what you've been working on. Ask what they've noticed.
WHAT TO WATCH	Observe one meeting without intervening. Just watch.	Notice how the team responds when something is named.	What shifted when you applied the framework?	Which behaviours feel natural now? What still takes effort?

WHERE YOUR TEAM-SPECIFIC PLAN LIVES

This cadence is the same for every leader. The specific moves for your team (who to prioritise, which decisions to redistribute, which 1:1s to run) are in your **Leader's Insight Report** (Section 07: the 30/60/90 Action Plan), drawn from your team's own data.

MAKE IT STICK

Spend five minutes with this guide each Friday. Check which week you're in, read the one action, and notice whether you did it. Total active time across 30 days is about 90 minutes.

OBSERVATION LOG & REVIEW

Capture What You Notice. Then Calibrate.

One honest observation a week is enough. You don't need to fill every field.

DATE / CONTEXT

WHAT I OBSERVED? WHAT WAS THE RESULT?

WHICH DIMENSION?

☐ Communication ☐ Decision-Making ☐ Collaboration

WHAT FRAMEWORK BEHAVIOUR WAS PRESENT? WHAT WAS ABSENT?

ONE THING TO TRY NEXT TIME

End of 30 Days: Five Questions

A calibration, not a performance review · ~20 min

- 1 What patterns from the report did you observe most clearly in real situations?
- 2 What changed in how you lead, even slightly?
- 3 Where did the frameworks feel useful? Where did they feel forced?
- 4 What does your team still do on autopilot that you'd like to shift?
- 5 What do you want to be true of this team in 12 months that isn't true yet?

THE

PERFORMANCE LENS

BY SAIGON YOUNG PROFESSIONALS

THE PERFORMANCE LENS

Stop guessing how your team performs.

See it. Fix it. Prove it.

This guide is part of **The Team Effectiveness Workshop**, from The Performance Lens by Saigon Young Professionals.
