The Leaders' Field Guide

Your post-workshop playbook, the three frameworks, plus a 30-day best-practice cadence for leaders, after The Leadership Workshop.

About This Guide

This guide is yours to keep. It contains the three frameworks delivered as part of The Leadership Workshop, each one a precise operating structure for the patterns your team's diagnostic is likely to have surfaced.

These are not theories. They are specific enough to apply in a meeting, and clear enough to teach to your team. Return to the relevant framework when the pattern emerges.

How to Use This Guide

Use the framework that matches what you are observing. When your team stalls without you, or drifts from the outcome you set, turn to [The Flywheel](#). When a change is not taking hold, or people revert to the old way under pressure, use [The Crossing](#). When tension is building but has not been named, use [The Forge](#). Each framework section includes a diagnostic prompts box, take those into your next one-on-one or team meeting.

The Three Dimensions

DIMENSION	WHAT WE MEASURE	FRAMEWORK
Leadership Leading with Intention	Whether people move on your intent or wait for your call. How clearly the why is set, and reset when reality shifts.	The Flywheel
Change Management Navigating Change	Whether change is built with the people who walk it, or handed down. Whether it holds under pressure or reverts.	The Crossing
Conflict Management Managing Conflict	How early friction gets named. Whether disagreement stays on the work, or turns personal.	The Forge

The frameworks are not sequential, they address different patterns. Your team's diagnostic report will identify which dimension showed the clearest signals. Start there. The other frameworks remain relevant as your team develops.

FRAMEWORK 01

The Flywheel

Leadership Dimension

Core Principle

Leadership here is not charisma, it is intent that compounds. When people understand the why, they can move without waiting for you, and every aligned action makes the next one easier.

The Five Steps

1

Set the Intent

Name the outcome and the why before the what.

2

Align the Team

Check people are pointed at it, not guessing.

3

Read the Field

Watch what the team is actually doing.

4

Adjust the Direction

Steer to reality, not the original plan.

5

Build Momentum

Intent compounds, so the team can act without you.

Prevents drift, bottlenecks, busywork, and a team that stalls without you.

Signs It's Breaking Down

- People ask what to do next whenever you step away.
- Work is busy but drifts from the outcome you wanted.
- You repeat the plan instead of adjusting it to what is happening.
- The team waits for your call on things they could own.
- Different people describe the goal differently.

How to apply it

Reach for it before you hand a team a goal or kick off a project; when people are busy but not pointed at the same outcome; when you are the bottleneck because nothing moves without you.

The leader sets the intent; the team keeps the flywheel turning.

Manager Diagnostic Prompts

- At your last kickoff, did you lead with the why, or just the task?
- Where are you the bottleneck? Which intent did you never make explicit?
- Who on your team can act on your intent when you are not in the room?

FRAMEWORK 02

The Crossing

Change Management Dimension

Core Principle

Change fails when a leader moves one part before understanding the whole, or drags people across a gap they never agreed to cross. It sticks when people help build the path and are carried through the hard middle.

The Five Steps

1

See the Whole

Understand how the pieces fit before you move one.

2

Name the Change

Is this a small tweak or a new way of working?

3

Build the Path

Design it with the people who have to walk it.

4

Move Through the Middle

Expect the pushback and carry people through it.

5

Re-Anchor

Make the new way the default so no one drifts back.

Prevents half-adopted change, reversion, and breakage from moving one part in isolation.

Signs It's Breaking Down

- A change was announced, then quietly abandoned.
- People revert to the old way as soon as pressure rises.
- A fix to one part keeps breaking another.
- Resistance surprises you late instead of being planned for.
- The team is stuck in the messy middle with no anchor.

How to apply it

Reach for it when something shifts and the old way no longer fits; before you roll out a new process, tool, or structure; when a change was announced but never took hold.

Understand the whole first; build the path with the people who walk it.

Manager Diagnostic Prompts

- Name a change that never stuck. Did people help build it, or just receive it?
- Where did you move one part before understanding the whole?
- Who will struggle most with your next change? What is your plan for them?

FRAMEWORK 03

The Forge

Conflict Management Dimension

Core Principle

High-performing teams are not conflict-free, they handle friction while it is still small and still about the work. Tension, worked well, forges something stronger, not something bruised.

The Five Steps

1

Make it Safe

Make challenging the work normal, not risky.

2

Name it Early

Say the problem while it is still one piece.

3

Keep it on the Work

About the work and the piece, not the person.

4

Get to the Interests

Find what each side is actually trying to do.

5

Resolve and Recommit

Settle it so trust ends up higher.

Prevents buried problems, personal blame, repeat friction, and slow erosion of trust.

Signs It's Breaking Down

- Problems get raised only once they are expensive to fix.
- People go quiet rather than challenge the work.
- The same friction returns because it was smoothed, not resolved.
- Disagreements get personal instead of staying on the work.
- Tension is felt in the room but never said out loud.

How to apply it

Reach for it when you sense friction but it has not been named; when the same disagreement keeps resurfacing between the same people; before a small problem in someone's work grows into a big one.

Name it early, keep it on the work, resolve it so trust ends up higher.

Manager Diagnostic Prompts

- Where is tension being smoothed over on your team instead of named?
- Name a disagreement that got personal. What interest was underneath it?
- Do people know that challenging the work is welcome here? How do they know?

Quick Reference

The three frameworks at a glance

FRAMEWORK 01

The Flywheel

Leadership Dimension

Leadership here is not charisma, it is intent that compounds. When people understand the why, they can move without waiting for you, and every aligned action makes the next one easier.

The Five Steps

- Set the Intent
- Align the Team
- Read the Field
- Adjust the Direction
- Build Momentum

Key signal

· People ask what to do next whenever you step away.

Diagnostic prompts

- At your last kickoff, did you lead with the why, or just the task?
- Where are you the bottleneck? Which intent did you never make explicit?

FRAMEWORK 02

The Crossing

Change Management Dimension

Change fails when a leader moves one part before understanding the whole, or drags people across a gap they never agreed to cross. It sticks when people help build the path and are carried through the hard middle.

The Five Steps

- See the Whole
- Name the Change
- Build the Path
- Move Through the Middle
- Re-Anchor

Key signal

· A change was announced, then quietly abandoned.

Diagnostic prompts

- Name a change that never stuck. Did people help build it, or just receive it?
- Where did you move one part before understanding the whole?

FRAMEWORK 03

The Forge

Conflict Management Dimension

High-performing teams are not conflict-free, they handle friction while it is still small and still about the work. Tension, worked well, forges something stronger, not something bruised.

The Five Steps

- Make it Safe
- Name it Early
- Keep it on the Work
- Get to the Interests
- Resolve and Recommit

Key signal

· Problems get raised only once they are expensive to fix.

Diagnostic prompts

- Where is tension being smoothed over on your team instead of named?
- Name a disagreement that got personal. What interest was underneath it?

30-Day Best Practices

A simple cadence for turning the workshop into habit

Four weeks, one focus each. This is the evergreen rhythm for embedding the frameworks - the same for every leader, every cohort. It is not a team-specific plan: the actions tailored to your team’s data live in your Leader’s Insight Report. Use this page to build the habit; use the report to know which behaviours to target.

WEEK	WEEK 1 Days 1-7	WEEK 2 Days 8-14	WEEK 3 Days 15-21	WEEK 4 Days 22-30
FOCUS	Ground the data	Name what you see	Apply deliberately	Lock in the habit
ONE ACTION	Re-read your team report. Underline the one sentence that surprised you most.	In one 1:1, name one pattern you observed - without blame.	Run one meeting using a single framework element on purpose.	Tell your team what you've been working on. Ask what they've noticed.
WHAT TO WATCH	Observe one meeting without intervening. Just watch.	Notice how the team responds when something is named.	What shifted when you applied the framework?	Which behaviours feel natural now? What still takes effort?

Where your team-specific plan lives

This cadence is the same for every leader. The specific moves for your team - who to prioritise, which decisions to redistribute, which 1:1s to run - are in your Leader’s Insight Report (Section 07: the 30/60/90 Action Plan), drawn from your team’s own data.

Make it stick

Spend five minutes with this guide each Friday. Check which week you’re in, read the one action, and notice whether you did it. Total active time across 30 days is about 90 minutes.

Observation Log & 30-Day Review

Capture what you notice. Then calibrate.

One honest observation a week is enough. You don't need to fill every field.

Date / context

What I observed

Which dimension? ☐ Leadership ☐ Change Management ☐ Conflict Management

What framework behaviour was present? What was absent?

One thing to try next time

End of 30 Days - Five Questions

Set aside 20 minutes. This is a calibration, not a performance review.

- 1 What patterns from the report did you observe most clearly in real situations?
- 2 What changed in how you lead - even slightly?
- 3 Where did the frameworks feel useful? Where did they feel forced?
- 4 What does your team still do on autopilot that you'd like to shift?
- 5 What do you want to be true of this team in 12 months that isn't true yet?
