

Resource Pack

Participant Edition

Your take-home companion after the workshop: the three frameworks you practised, a worked example of each, and space to turn what you noticed into a change you actually make.

THIS PACK INCLUDES

What this is (and what it isn't)

The three frameworks

See each one in action

Reflection worksheets

Quick reference & glossary

START HERE

You've already done the hard part

You've just spent a day leading under real pressure: setting intent, navigating change, and managing conflict when it mattered. You saw where your leadership instincts serve you well, and where they slip under pressure. This pack is for what comes next.

This is a toolkit to keep: the three frameworks from your workshop, a worked example of each, and the exact words you can use when the moment comes.

THINK OF THESE AS YOUR SUPPORT SYSTEM

In the room, the frameworks felt deliberate, maybe even slow. That's the point. Lean on them on purpose: reach for the page the next time you need to set intent, a change isn't landing, or friction on the team needs naming. With repetition they stop being something you look up, and start being something you just do.

How to use this pack

When people wait on you for the next move, or a project starts without a clear why: run The Flywheel.

When a change you rolled out isn't sticking, or the team reverts the moment pressure rises: run The Crossing.

When friction has gone unnamed, or the same disagreement keeps coming back: run The Forge.

Keep this nearby. You don't need to read it cover to cover: pull it out when a pattern shows up and go straight to the framework that matches.

READ THIS FIRST

A snapshot, not a label

Your profile is a snapshot of how you showed up in a few specific exercises, on a single day, under deliberately artificial pressure. It is not a label. It is not a ranking. It is not a measure of your ability, your intelligence, your value, or your potential.

The exercises were built to create pressure and constraint quickly: that is what makes patterns visible in a single afternoon. But pressure in a game is not the same as your work, your week, or your career. The same person, on a different day, leading a different team, with a different task, can show up completely differently. That is expected.

So treat your result as a mirror for one moment, not a verdict on who you are as a leader. The point was never to score you. It was to give you something concrete to reflect on and build from.

If your profile doesn't match how you see yourself, that gap is useful. Explore it with curiosity. Don't accept it as fact. We were here to observe, not to judge. This was practice, not performance.

THE THREE FRAMEWORKS

Three tools from your workshop

Each framework is a simple, repeatable habit you can build. Here they are to keep, with a worked example of each. Start with whichever matches the pattern you see most in your leadership; the others are here when you're ready.

The Flywheel

Leadership · reach for it before you hand a team a goal or kick off a project

The Crossing

Change Management · reach for it when something shifts and the old way no longer fits

The Forge

Conflict Management · reach for it when you sense friction but it has not been named

FRAMEWORK 01 · Leadership

The Flywheel

Leadership here is not charisma, it is intent that compounds. When people understand the why, they can move without waiting for you, and every aligned action makes the next one easier.

See it in action

A project that keeps waiting on you

BEFORE You hand the team a task list for a new client rollout and move on. Two days later everything is paused on small questions, because people know the steps but not the outcome those steps are serving.

AFTER You run the flywheel:

- **Set the intent:** the client needs to feel confident by launch, that is what we are protecting.
- **Align the team:** each person says how their piece serves that outcome.
- **Read the field:** you notice two workstreams solving the same thing.
- **Adjust the direction:** you merge them rather than repeat the plan.
- **Build momentum:** the team starts making the small calls without you.

The result: the team moves on its own toward the outcome, instead of queuing at your desk.

Words you can use

To set the intent	"Here's the outcome we're aiming for, and here's why it matters."
To align the team	"Can each of you tell me how your piece serves that outcome?"
To read the field	"What's actually happening out there right now?"
To adjust direction	"Given what we're seeing, here's what we're changing."
To build momentum	"You don't need to check with me on this one. Make the call."

Reach for it when

- Before you hand a team a goal or kick off a project.
- When people are busy but not pointed at the same outcome.
- When you are the bottleneck because nothing moves without you.

What breaks it

- ✗ Giving the what, the task, without the why, the outcome.
- ✗ Assuming alignment instead of checking the team is aimed right.
- ✗ Holding the original plan after the field has changed.

"Before we start, can everyone say the outcome we are steering toward, and why?"

FRAMEWORK 02 · Change Management

The Crossing

Change fails when a leader moves one part before understanding the whole, or drags people across a gap they never agreed to cross. It sticks when people help build the path and are carried through the hard middle.

See it in action

A new process that never takes

BEFORE You roll out a new handoff process by email. It works for a week, then under a busy period everyone reverts, because they never understood how it changed the rest of their work.

AFTER You run the crossing:

- **See the whole:** you map how the handoff touches three other steps.
- **Name the change:** this is a new way of working, not a tweak.
- **Build the path:** the people doing the handoff design it with you.
- **Move through the middle:** you expect the first busy week to strain it and stay close.
- **Re-anchor:** you make the new handoff the default and retire the old one.

The result: the change holds under pressure, because the team built it and crossed together.

Words you can use

To see the whole	"How does this change touch the rest of what we do?"
To name the change	"Is this a small tweak, or a new way of working?"
To build the path	"You're the ones who'll walk this. Help me design it."
To cross the middle	"This will feel harder before it feels normal. Let's expect that."
To re-anchor	"This is the new default now, not a trial."

Reach for it when

- When something shifts and the old way no longer fits.
- Before you roll out a new process, tool, or structure.
- When a change was announced but never took hold.

What breaks it

- ✗ Changing one part before you understand the whole system.
- ✗ Selling the change as done when the team has not crossed yet.
- ✗ Assuming a good plan sells itself, so ignoring the resistance.

"Before we change this, do we understand the whole it sits inside, and who has to walk the new path?"

FRAMEWORK 03 · Conflict Management

The Forge

High-performing teams are not conflict-free, they handle friction while it is still small and still about the work. Tension, worked well, forges something stronger, not something bruised.

See it in action

A disagreement that keeps coming back

BEFORE Two of your people clash on every handoff. It gets smoothed over each time, so it returns the next week, a little more personal, because the real issue was never named.

AFTER You run the forge:

- **Make it safe:** you frame it as fixing the work, not judging either person.
- **Name it early:** you raise the specific handoff, not the whole history.
- **Keep it on the work:** you talk about the piece, not the personalities.
- **Get to the interests:** one wants speed, the other wants accuracy.
- **Resolve and recommit:** you agree a checklist that serves both, and check in Friday.

The result: the friction resolves for good, and the two trust each other more than before.

Words you can use

- To make it safe** "I want us to be able to challenge the work here. That's welcome."
- To name it early** "Can we talk about this now, before it grows?"
- To keep it on the work** "Let's stay on the handoff itself, not on each other."
- To get to the interests** "What are you actually trying to protect here?"
- To resolve and recommit** "Here's what we're agreeing to, and here's when we'll check it worked."

Reach for it when

- When you sense friction but it has not been named.
- When the same disagreement keeps resurfacing between the same people.
- Before a small problem in someone's work grows into a big one.

What breaks it

- ✗ Smoothing tension over rather than naming it.
- ✗ Waiting until a problem is big instead of raising it small.
- ✗ Arguing positions instead of the interests underneath them.

"What is the real issue here, on the work, and what is each of us actually trying to achieve?"

The Flywheel

These prompts are for you: nobody else needs to see them, and there are no right answers. Pick the dimension you most want to develop and start there.

1. Think of a project where people kept waiting on you. What intent did you never say out loud?

2. Who on your team already acts on your intent without asking? What do they pick up on?

3. When did a plan stay fixed after the situation had already changed? What did that cost?

4. Pick a goal you're about to hand off. What's the intent, and how will you check the team is aligned to it?

The Crossing

These prompts are for you: nobody else needs to see them, and there are no right answers. Pick the dimension you most want to develop and start there.

1. Think of a change that never really stuck. Did people help build it, or just receive it?

2. Where in your team's work does one change keep breaking something else downstream?

3. When resistance to change surprises you, is it really a surprise, or a signal you missed early?

4. Take a change you're about to roll out. What's the whole it sits inside, and who needs to help build the path?

The Forge

These prompts are for you: nobody else needs to see them, and there are no right answers. Pick the dimension you most want to develop and start there.

1. Think of a disagreement that got personal. What was the real interest underneath it?

2. Who on your team raises friction early? Who tends to let it build instead?

3. What's the first sign tension is building on your team? How is it usually handled?

4. Pick a recurring friction point. How could you name it early, and keep it on the work rather than the person?

THE THREE FRAMEWORKS

Quick Reference

Keep this on your phone. Pull it up the moment a pattern shows up.

The Flywheel · Leadership

Use it before you hand off a goal or kick off a project.

Set the Intent → Align the Team → Read the Field → Adjust the Direction → Build Momentum

Say: "Before we start, can everyone say the outcome we are steering toward, and why?"

The Crossing · Change Management

Use it before you roll out a new process, tool, or structure.

See the Whole → Name the Change → Build the Path → Move Through the Middle → Re-Anchor

Say: "Before we change this, do we understand the whole it sits inside, and who has to walk the new path?"

The Forge · Conflict Management

Use it when you sense friction that hasn't been named yet.

Make it Safe → Name it Early → Keep it on the Work → Get to the Interests → Resolve and Recommit

Say: "What is the real issue here, on the work, and what is each of us actually trying to achieve?"

REFERENCE

Glossary

Snapshot

How you showed up in specific exercises on one day under pressure: a moment, not a label or a measure of ability.

Leadership Archetype

A description of how a leader tended to operate under the workshop's conditions. Describes current patterns, not fixed traits.

Defaults

The patterns you fall back on automatically under pressure: habits rather than choices. Pressure makes them visible.

Pressure reveals defaults

The principle behind the workshop: under time and constraint, people stop performing and start defaulting to instinct. That's what the exercises were built to surface.

The Flywheel

The leadership framework. Set the intent, align the team, read the field, adjust direction, and build momentum so the team can move without you.

The Crossing

The change management framework. See the whole, name the change, build the path with the people who walk it, move through the middle, and re-anchor the new way as the default.

The Forge

The conflict management framework. Make it safe, name friction early, keep it on the work, get to the interests underneath, and resolve so trust ends up higher.

Intent

The outcome and the why behind it, named before the what. The opening move of the Flywheel, and the thing a team can act on without you in the room.

Momentum

What builds when intent is clear and repeated: the team starts making calls without waiting for you.

Bottleneck

When nothing moves without the leader in the room. A sign that intent was never made explicit enough for the team to act on it.

Reading the Field

Watching what the team is actually doing, not just what the plan says they're doing. The Flywheel's third step, and how a leader catches drift early.

The Whole

How every part of a system connects. The Crossing's first move: understand the whole before you change one part of it.

The Messy Middle

The hard stretch between the old way and the new one, where pushback surfaces and people are tempted to revert. Expect it, and carry people through it.

Re-Anchor

Making the new way of working the default, so no one quietly drifts back to the old one.

Handoff

Any point where work, or a way of working, passes from one person or process to another. A common place a change quietly fails to take hold.

Interests

What each side is actually trying to protect or achieve underneath a disagreement, as distinct from the position they're arguing. The Forge's fourth step.

Name it Early

Raising a problem while it is still small and still about the work, before it grows or gets personal. Delaying this is what most often turns friction into a bruise.

Keep it on the Work

Talking about the piece of work in question, not the person doing it. The move that stops a disagreement from turning personal. The Forge's third step.

Dimension

One of the three things the workshop measures: Leadership, Change Management, and Conflict Management.

Set the intent. Cross the gap. Lead forward together.

Human skills for a digital future.
